House waybill reporting
The US 4-hour rule requires that house waybill information is provided before arrival.

CPS allows forwarders to send data:
- Using EDI via Internet as an FHL industry-standard message; or
- Using the CPS web interface.

The web interface allows forwarders to retrieve, review and update data directly onto the carrier systems.

No VAN / CPS / communications charges and one connection provides access to all CPS carriers.

The same message interface can also be used for system-system status, air waybill and booking messages.
